We're the data experts, we'll fix any data problem.

Master Data Quality Experts

PiLog™ is a leading international provider of master data quality solutions and Cataloging at Source. PiLog has been providing military and industrial cataloging, data cleansing and classification services since it was established in 1996. The PiLog services and software applications are certified compliant with ISO 8000-110:2009, the international standard for quality master data.

PiLog™ works with its customers to measure and improve the quality of their vendor, customer, product, material and service masters, as well as, the quality of the rendered multilingual descriptions generated from their master data.

Communicate Better With ISO 8000 Quality Data

ERP's run better on ISO 8000

Leader in Providing Master Data Quality Solutions

PiLog MDOM™: The PiLog ISO 8000 Master Data Ontology Manager makes it possible to turn an informal business language into a formal ontology by leveraging the millions of defined concepts in the eOTD and defining and managing data requirements, the standard for measuring ISO 8000 data quality. The PiLog ISO 8000 Master Data Ontology Manager uses ISO 22745 data exchanges to interact with the Corporate Preferred Ontology stored on the PiLog ISO 8000 Ontology Server.

PiLog MDRM™: The PiLog Master Data Record Manager (PiLog MDRM™) is the primary interface to the PiLog hosted ISO 8000-120 master data server, a hosted secure server designed to safely store portable master data and associated provenance data in compliance with ISO 8000-120. The PiLog ISO 8000 Master Data Record Manager uses ISO 22745 data exchanges to interact with both the Corporate Preferred Ontology stored on the PiLog ISO 8000 Ontology Server and the Corporate Master Data stored on the PiLog ISO 8000-120 Master Data Server.

Value Standardization App: The value standardization application is designed to be used by Master Data Quality Managers to analyze the property values within a class to standardize controlled values and units of measure.

Master Data De-duplication App: The master data de-duplication application is designed to be used by Master Data Quality Managers to generate reports of potential duplicates.

Authoritative Source App: The authoritative source (Master Data @ Source) application manages the generation and distribution of requests for data to authoritative sources of data.

Structured Free Text Description App: The structured free text description application is specifically designed to be integrated with third party procurement or maintenance planning applications where users have the ability to enter free text descriptions.

Multilingual Description App: The multilingual description application applies the rendering guides in the PiLog Master Data Ontology Server to create unlimited multilingual user defined descriptions from the master data records.

Data Interface Management App: The data interface management application includes advanced mapping technology combined with preset mapping solution for common third party applications.

Free Data Quality Evaluation

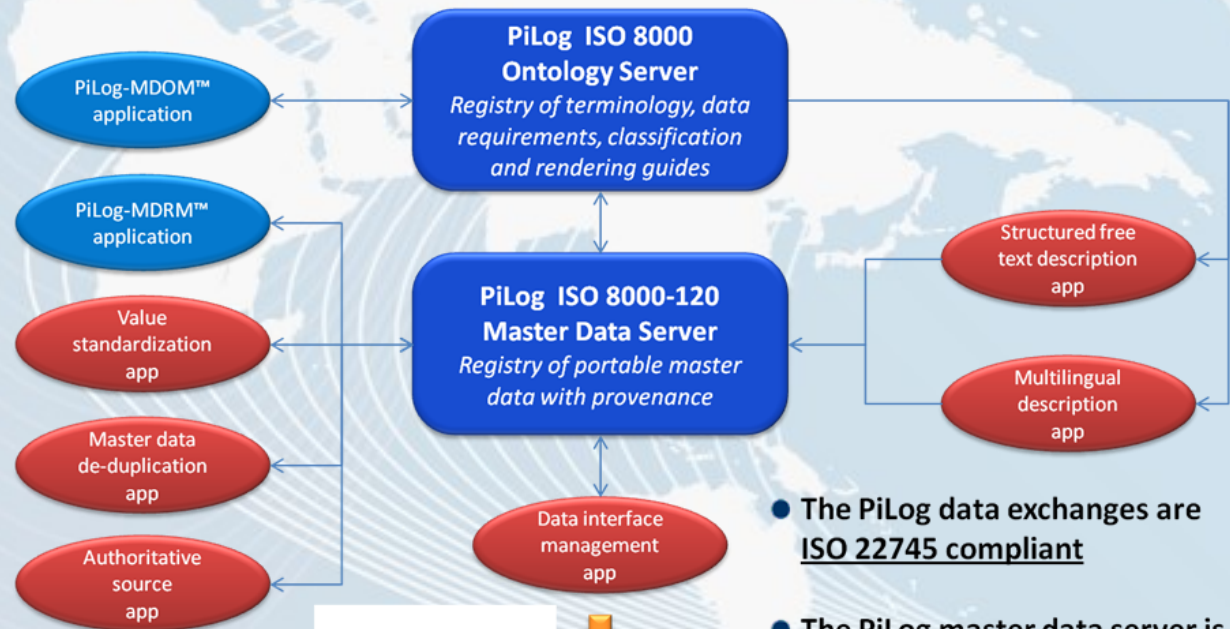

The goal of the evaluation is to provide guidance in the effort required to improve the quality of your master data and to provide you with an indication of where such improvements are most likely to yield the highest return.

To sign up for your free evaluation please go to www.pilog.in/masterdataqualitydownload.html

PiLog™ software applications & data solutions are ISO 8000-110:2009 Certified

ISO 8000 Data Quality as a Service

- The PiLog data exchanges are **ISO 22745 compliant**
